 [Nicholas Wainwright - LinkedIn](#)

Personal Skills

- Excellent verbal and written communication.
- Project, personnel, and task management.
- Ability to lead teams, analyze problems, identify trends, and develop strategy.

Technical & GRC Skills

- Cloud Security: AWS, GCP, Azure, Compute Engine, Patch Management, Kubernetes, VPC Network Configurations, IAM, Security Operations
- SIEM & Monitoring: Splunk Cloud, Google Chronicle, Datadog, Tenable Nessus, OpenVAS vulnerability scanning, patch automation
- Infrastructure as Code Security: Trivy, Google Cloud Security Command Center
- Automation & Scripting: Python, Bash, Powershell, Terraform
- Compliance & Risk: SOC2 (Type I and Type II), NIST 800-53, FedRAMP, CJIS, HIPAA

Education

BA in Computer Science

Minor in Cybersecurity

University of Rhode Island

Certifications

CCSK Certification

Certificate of Cloud Security Knowledge

Splunk Certification

Enterprise Security Certified Admin
Certified Cybersecurity Defense Analyst
Core Certified Power User

Profile

I am a Security Engineer with expertise in securing, maintaining, managing and creating multi-cloud environments, automating security processes, and implementing robust security controls for best practices. My knowledge spans many areas, with cross-cloud experience, shift-left security best practice implementation, AI adaption, compliance, and many more across different domains. I have a strong background in security engineering, compliance (SOC 2, NIST 800-53, CJIS, FedRAMP, and HIPAA), and DevSecOps.

Experience

2023 – Present | Spatial Data Logic, Somerset, NJ

Security Engineer

Lead security and compliance across Google Cloud Platform and Azure, managing security best practices around many different areas.

- Deployed EDR (SentinelOne) across cloud environments. Configured to provide agentic analysis on production and development machines
- Configured Splunk and Datadog for SIEM services, improved threat visibility and mitigation in cloud environments. Reduces time to remediation drastically.
- Designed and enforced SOC 2, HIPAA, CJIS, and NIST 800-53 compliance controls and security policies to ensure compliance. Led all efforts to complete multiple audits.
- Developed repositories in Azure DevOps and GitHub to automate security best practices (FIM, asset inventory, compliance checks based on framework, SQL Server Secret Rotation, IaC)
- Assisted internal teams in securing containerized workloads (Docker, Kubernetes) and implementing CI/CD pipeline security
- Enforced principle of least privilege across all environments, deployed ZTNA across all environments, lead tabletop exercises, audited all systems within GCP and Azure (IAM, firewall, network security)

2016 – Present | MCPlus LLC, Newport, RI

Security Engineer

Consulted on cloud security strategies for SMB and enterprise clients, focusing on GCP and Azure security hardening efforts.

- Conduct monthly/annual cloud security assessments, identifying vulnerabilities and mitigation strategies for clients.
- Developed automation scripts using Python for cloud security monitoring and log ingestion.
- Collaborated with developers and DevOps teams to secure operations

2021 – 2023 | TAG Cyber LLC, New York, NY

Data Research Analyst

- Curated cybersecurity SQL databases and managed IT infrastructure.
- Automated cybersecurity frameworks and controls (NIST)
- Gained AWS security experience, such as IAM policies and Security Hub
- CI/CD tools (GitHub Actions, AWS Repositories) and secure coding best practices (SAST, DAST)
